

Leak detection remains one of the most challenging inspection applications and the Fast Line Inspections® FLI-SealTester-MAP1-M/L is the answer to it. Our motto is: "**Measuring is Knowing**" when it comes to checking pouches.

For more than 10 years Fast Line Inspections® is producing several types of **inline SealTesters** to test the integrity of flexible pouches. Leaking pouches cause not only big trouble (pollution) further in the packaging line, as well as loss of quality of the product ( and even re-calls!).

The price and capacity of the newest version of the FLI-SealTester-MAP1-M/L is such that the return on investment is less than a year, apart from the fact that manual checking is no longer possible due to higher speeds and health problems for the employees.

*Standard MAP1-L

Products like vegetables, grated cheese, crisps and even wet-wipes can be tested at high speed. Even if the machine needs to be under an **angle**.
