INSPECTION AND SERIALIZATION OF LABEL ON REEL

Track and trace workstation

Trackroll. Serialization of the primary packaging.

Trackroll is an automatic workstation for the **printing and control of serialized labels** gathered in reel. It is a powerful and flexible solution for the **offline serialization of primary packaging** across multiple packaging lines.

Serialization of

handling

Flexibility

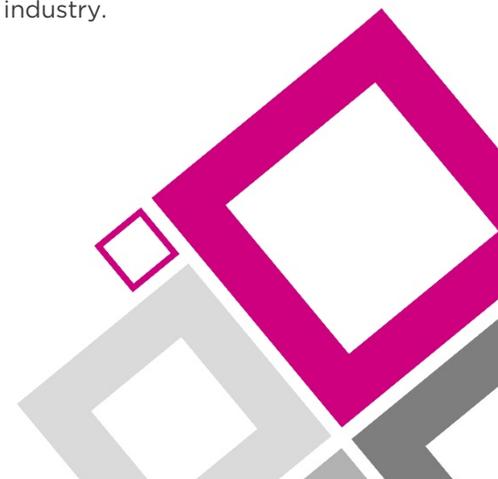

Easy to use

Trackroll is the offline solution for the printing, inspection and serialization of labels gathered in the label reel.

Trackroll **prints and controls variable data** and both **serialized and non-serialized codes** in real time on labels wrapped in the label reel. It is also possible to perform **PQV control** on the pre-printed artworks.

All information is printed on **labels** that can be **applied to different products** such as vials, ampoules, cartons and more, always respecting the main guidelines of the pharmaceutical industry.

The system is designed to guarantee that the label reel will **only contain good labels** by the end of the process. Thanks to the integration between the software and the machine PLC, the machine will stop once a rejected code is detected and it will not start again until it is removed. The label reel rewinding and unwinding are automatic.

Control results are shown on the display in real-time along with instructions regarding the steps to execute, maximizing clarity and visibility for the operator.

The system is specifically designed for pharma market

Trackroll is suitable to all production environments.

The workstation is equipped with wheels and can be easily and comfortably moved into production, exactly where it is needed.

The printing of offline label reels makes it suitable to simultaneously support the packaging serialization of multiple packaging lines.

Cameras and illuminators are specific for the optimal reading of variable data and of codes printed on labels.

The system is compliant with all the regulations of the pharmaceutical industry, with user access regulated by the directives of the FDA 21 CFR part 11 regulations. All events are registered in an audit trail file. Software development is Gamp 5 compliant.

Native integration with SEA Vision systems

Trackroll is a solution that natively integrates with trackability systems and with Yudoo, the 4.0 software suite for the centralized production management.
