

Adelphi Manufacturing

Upgrade efficiency and productivity with the Response Monobloc Filler & Capper, for the **Cosmetics & Personal Care Industry**

UK MANUFACTURED: ZERO EU IMPORT DUTY

Suitable for Creams, Serums, Oils, Scrubs, Shampoos, Conditioners and more

Time-efficient, fast filling and capping

- Up to 35 containers per minute on a 10ml fill, and up to 30 per minute on a 200ml fill (dependent on product and container).
- Standard machine: 3ml – 500ml filling (containers up to 85mm diameter, up to 250mm high). Larger machine up to 1L filling (containers up to 110mm diameter, up to 200mm high). Capable of low to high viscosity filling, including scrubs with particulates.
- Quick and easy to change parts from one fill-size container to another (takes on average 20 min), to reduce costly production downtime.
- Different container sizes can be pre-programmed, for re-call any time in the future. This significantly reduces the set-up time for each shift, and also reduces the changeover time between filling different products.

Reduces product waste, increases profitability

- Exceptional filling accuracy of up to $\pm 0.25\%$ significantly improves your ROI.
- 'No container, No fill' sensor reduces container and product waste.
- Precise torque application, for a higher quality of capping and fewer rejects.

Enhanced Quality Control

- Ability to pre-set for check weighing; for example, to identify every 20th product to be ejected for checking.
- Options to collect data on the containers produced, which can be downloaded onto a memory stick for your convenience.

Exceptionally Hygienic

- 316L pharmaceutical grade stainless steel wetted parts and sanitary Tri-Clamp hopper connections adhere to FDA regulations, to guarantee international pharma-quality compliance for your business.
- Clean, lubricant-free pneumatics, certified for use with cosmetics, foods and pharmaceuticals.

Our technical team will be delighted to suggest the best specification for you. Please share with us the below information, so that we can prepare a quotation:

1. Product Details
2. Product Viscosity
3. The container volumes required to be filled and capped
4. Container and cap dimensions
5. The filling and capping speeds expected
