CS SERIES, AUTOMATIC CARTONING FOR DAIRY PRODUCTS

CS Series equipment is designed for automatic cartoning of dairy products such as processed and cream cheese, starting from flat blanks.

Available with a variety of infeed arrangements, these machines manage up to 75 boxes/minute in various sizes, allowing multi-layer packaging configurations.

Operating with open flat blanks, CS Series help to reduce procurement costs compared to using pre-glued cartons. CS Series machines efficiently wrap pre-formed bundles of dairy products, sealing them with tucked and glued end-flaps along with a glued longitudinal flap, using either hot melt or cold melt glue for secure closure.
